## CCC Acid Etch

**CCC Acid Etch** not only has stylish appeal that enhances any outdoor area such as alfrescos, paths and driveways, but is **NON SLIP** making it perfect for around pools and eradicating the need for coping.

Architects, builders and homeowners alike endorse the unmatched range of styles and colours and also its ability to bring old concrete back to life including obliterating sharp exposed aggregate and renewing rain damaged concrete.

Now you can have a non-slip surface that is kind to bare feet and beautiful.

With minimal care the product will stay like new for years to come.

The unique **CCC ACID ETCH** procedure is a closely guarded secret that our competitors would love to have! It is a complex process to get right. In essence we grind to the desired exposure, etch with acid, wash and seal with 2 coats of Nu-tech.

CCC Polished Concrete receives outstanding results and feedback from this product. This side of CCC Polished Concrete is growing steadily and has provided us with some very exciting finished products.

\*\*\*It is important not to confuse CCC Polished Concrete's **CCC ACID ETCH** with Acid Wash. Acid Wash is just a 10-1 mix, broomed over the floor, rinsed off allowing the sealer to then bond with the concrete.

\*\*\* We at CCC Polished Concrete like to pre-inspect the slab our motto being "ring before you pour" – with **CCC Acid Etch** this will save you valuable time on site.
