Non-Slip Finish

What is a Non-Slip Finish?

A non-slip finish can be used on all outside concrete surfaces where slippage is a problem, for example ramps, walks ways and alfresco areas.

Procedure

- Grind with 30 grit to desired exposure.
- Grind with 60 grit to remove scratches.
- Grind with 120 grit to further remove scratches.
- Thoroughly clean the surface.
- Apply 50/50 coat of sealer.
- Apply one or two coats of sealer to cover.
- Apply one coat of non-slip sealer.

Some concretes that are ground require grouting to fill holes in the surface. This will be left to the client's discretion.

Maintenance

It is easy to maintain and the finish can be replied every 4 to 5 years depending on whether it is a high traffic area. This will enhance the concretes overall look. It can be washed with soapy water to retain luster.
