

Acrylic / Polyurethane

Topical sealers are available in either Acrylic, Epoxy or Polyurethane. Able to be used on all concrete surfaces, they come in either matt, satin or gloss finish.

Procedure

- Grind with 30 grit to desired exposure.
- Grind with 60 grit to remove scratches.
- Grind with 120 grit to further remove scratches.
- Thoroughly clean the surface.
- Apply at least 2 coats of Sealer.
- Some concrete when ground requires grouting to fill up holes and imperfections in the surface. This can result in an overall better look, but is up to the client's discretion.

Maintenance

Requires recoating in 4-5 years time. (Machine strip/grind and re-seal.)

Refer to Sealer Maintenance Sheet.
